## 0.1 Warmup problem B

Prove that, for all real  $a$  and  $b$  we have

$$(a + b)^4 \leq 8(a^4 + b^4).$$

This problem is simple enough for Isabelle to solve it automatically — with the Sum of Squares decision procedure.

**theorem**

```

(a+b)^4 ≤ 8*(a^4 + b^4) for a b :: real
by sos

```

Of course, we would rather elaborate. We will make use of the inequality known as *sum-squares-bound*:

$$(2::'a) * x * y \leq x^2 + y^2$$

**theorem**

```

(a+b)^4 ≤ 8*(a^4 + b^4) for a b :: real

```

**proof** —

```

have lemineq: 2*x^3*y ≤ x^4 + x^2*y^2 for x y :: real
using sum-squares-bound [of x y]
and mult-left-mono [where c=x^2]
by (force simp add: numeral-eq-Suc algebra-simps)

```

```

have (a+b)^4 = a^4 + 4*a^3*b + 6*a^2*b^2 + 4*a*b^3 + b^4 by algebra
also have ... ≤ a^4 + 2*(a^4 + a^2*b^2) + 6*a^2*b^2 + 2*(b^4 + a^2*b^2) + b^4
using lemineq [of a b]
and lemineq [of b a]
by (simp add: algebra-simps)
also have ... = 3*a^4 + 3*b^4 + 10*a^2*b^2 by (simp add: algebra-simps)
also have ... ≤ 8*(a^4 + b^4)
using sum-squares-bound [of a^2 b^2]
by simp
finally show ?thesis.

```

**qed**

Another interesting proof is by Jensen's inequality. In Isabelle, it's known as the *convex-on* lemma:

```

convex S ⇒
convex-on S f =
(∀ k u x.
  (∀ i ∈ {1..k}. 0 ≤ u i ∧ x i ∈ S) ∧ sum u {1..k} = 1 ⟶
  f (∑ i = 1..k. u i *R x i) ≤ (∑ i = 1..k. u i * f (x i)))

```

Note that the sequences  $u$  and  $x$  are modeled as functions  $\text{nat} \Rightarrow \text{real}$ , thus instead of  $u_i$  we have  $u\ i$ .

Make sure not to confuse the *convex-on* lemma with the *convex-on* predicate, which is defined by *convex-on-def*:

```

convex-on s f =
(∀ x ∈ s. ∀ y ∈ s. ∀ u ≥ 0. ∀ v ≥ 0. u + v = 1 ⟶
  f (u *R x + v *R y) ≤ u * f x + v * f y)

```

The bulk of the work, of course, is in showing that our function,  $x \mapsto x^4$ , is convex.

**theorem** *warmup2*:

$(a+b)^4 \leq 8*(a^4 + b^4)$  **for**  $a\ b :: \text{real}$

**proof** –

**let**  $?f = \lambda x. x^4$

**have** *convex-on UNIV*  $?f$

**proof** (*rule f''-ge0-imp-convex*)

**show** *convex UNIV* **by** *auto*

**let**  $?f' = \lambda x. 4*x^3$

**show** ( $?f$  *has-real-derivative*  $?f' x$ ) (at  $x$ ) **for**  $x :: \text{real}$

**using** *DERIV-pow* [**where**  $n=4$ ] **by** *fastforce*

**let**  $?f'' = \lambda x. 12*x^2$

**show** ( $?f'$  *has-real-derivative*  $?f'' x$ ) (at  $x$ ) **for**  $x :: \text{real}$

**using** *DERIV-pow* [**where**  $n=3$ ]

**and** *DERIV-cmult* [**where**  $c=4$ ]

**by** *fastforce*

**show**  $0 \leq ?f'' x$  **for**  $x :: \text{real}$

**by** *auto*

**qed**

**hence**  $(a/2 + b/2)^4 \leq a^4/2 + b^4/2$  (**is**  $?lhs \leq ?rhs$ )

**using** *convex-onD* [**where**  $t=1/2$ ] **by** *fastforce*

**also have**  $?lhs = ((a + b)/2)^4$  **by** *algebra*

**also have**  $\dots = (a+b)^4/16$  **using** *power-divide* [*of*  $a+b\ 2$ , **where**  $n=4$ ] **by** *fastforce*

**finally show** *?thesis* **by** *auto*

**qed**

**end**
