1.1 Problem 1

theory *Problem1*
  imports *Complex-Main*
begin

Let a, b be real numbers. Let's assume that, for all real numbers x, y the inequality $|(ax + by)(ay + bx)| \leq x^2 + y^2$ is satisfied. Show that $a^2 + b^2 \leq 2$.

theorem *OM1*:
  fixes *a b* :: *real*
  assumes *given*: $\bigwedge x\ y$ :: *real*. $|(a{*}x + b{*}y){*}(a{*}y + b{*}x)| \leq x^2 + y^2$
  shows $a^2 + b^2 \leq 2$
proof –
  from *given* [**where** $x{=}1$ **and** $y{=}1$] **have** $(a{+}b)^2 \leq 2$
    by (*simp add*: *power2-eq-square*)
  moreover from *given* [**where** $x{=}1$ **and** $y{=}{-}1$] **have** $(a{-}b)^2 \leq 2$
    by (*simp add*: *power2-eq-square right-diff-distrib′*)
  ultimately have $(a{+}b)^2 + (a{-}b)^2 \leq 4$ **by** *auto*
  moreover have $(a{+}b)^2 + (a{-}b)^2 = 2{*}(a^2 + b^2)$ **by** *algebra*
  ultimately show $a^2 + b^2 \leq 2$ **by** *auto*
